

I am writing this out of concern regarding petition 04-160. This petition would take away local traffic and weather and other valuable services which XM radio provides me. These features are the exact reason I signed up for this service. All of the Terrestrial radio options in my area (Balto/DC) only broadcast traffic and weather at the top or bottom of the hour or something similar. XM radio's service has become invaluable to me in saving me time on my daily commute. I can think of no reason this petition is being propped except that the supporters of the petition see it as a potential impact of there market. There is nothing illegal or unfair about broadcasting traffic and weather information via the XM radio service. If this petition passes it will meaninglessly take away a great feature XM radio offers. There is no possible redeeming value from the petition except the supporters of this petition will get fatter wallets by having more listeners. Please reject this petition.

Regards,

William Antoszewski
